## Fascination with Automated Driving

**ELECTRICITY MAY BE THE DRIVER.** One day your car may speed along an electric super-highway, its speed and steering automatically controlled by electronic devices embedded in the road. Travel will be more enjoyable. Highways will be made safe—by electricity! No traffic jams . . . no collisions . . . no driver fatigue.

## Modern Day Futuristic Vehicle

## Current Competitor Automated Driving Systems

## HOW DID WE GET HERE?

**Audi's “*Jack*” Piloted Drive Vehicle**

## VW & Audi Pioneers in AV Technology

- Volkswagen's "Stanley" – Winner of the 2<sup>nd</sup> DARPA Grand Challenge 2005 (There was no winner of the 1<sup>st</sup> DARPA Grand Challenge).
- In Smithsonian
- Note cameras and antennae

## Volkswagen's "Junior" Passat Wagon Placed 2<sup>nd</sup> out of 85 2007 DARPA Urban Challenge

## **Audi & Stanford University's “Shelley” 2010**

**First to climb 14,000  
foot summit of  
Pike’s Peak  
completely  
unmanned (2010)**

**Nearly 13 miles with  
156 precarious  
turns without  
stopping!**

## Other Audi “Firsts”

**“California’s First Autonomous Driving Permits Go to Audi...”**  
**Car & Driver September 23, 2014**

---

**Audi claimed the fastest fully-automated driving speed  
on a race course at**

**149 mph**

**Hockenheim, Germany - 2014**

## **Industry Creates Standards**

### **Driving automation vs. other kinds of automation**

Focused on automating driving task

SAE taxonomy of driving automation (J3016)

- classification system with 6 levels (0-5)
- supporting terms and definitions.

Does not apply to:

- automated components (windows, doors, sunroofs, etc.)
- warning systems (forward collision, blind spot, back-up, etc.)
- emergency intervention systems (anti-lock brake system, electronic stability control, automated emergency braking, etc.)

## Why terms, definitions and levels matter

Avoid confusion and facilitate discussion

- Same words used to mean different things (conferences, media reports, advertising...)
- Consensus taxonomy and definitions save time and effort (“short-hand”)
- Categorize technology based on functional attributes

Support legal and policy discussion and development

- What’s in-/out-of-scope
- Level-appropriate requirements (if any)
- Clarify driver’s role in proper usage

## Summary table describing levels (SAE J3016)

| SAE level   | Name                          | Narrative Definition   | Execution of Steering and Acceleration/Deceleration | Monitoring of Driving Environment | Fallback Performance of Dynamic Driving Task | System Capability (Driving Modes) |
|---|-------------------------------|--|---|-----------------------------------|--|-----------------------------------|
| <b>Human driver monitors the driving environment</b>                        |                               |  |   |                                   |  |                                   |
| <b>0</b>  | <b>No Automation</b>          | the full-time performance by the <i>human driver</i> of all aspects of the <i>dynamic driving task</i> , even when enhanced by warning or intervention systems   | Human driver  | Human driver                      | Human driver                                 | n/a                               |
| <b>1</b>  | <b>Driver Assistance</b>      | the <i>driving mode</i> -specific execution by a driver assistance system of either steering or acceleration/deceleration using information about the driving environment and with the expectation that the <i>human driver</i> perform all remaining aspects of the <i>dynamic driving task</i>           | Human driver and system                             | Human driver                      | Human driver                                 | Some driving modes                |
| <b>2</b>  | <b>Partial Automation</b>     | the <i>driving mode</i> -specific execution by one or more driver assistance systems of both steering and acceleration/deceleration using information about the driving environment and with the expectation that the <i>human driver</i> perform all remaining aspects of the <i>dynamic driving task</i> | <b>System</b>                                       | Human driver                      | Human driver                                 | Some driving modes                |
| <b>Automated driving system ("system") monitors the driving environment</b> |                               |  |   |                                   |  |                                   |
| <b>3</b>  | <b>Conditional Automation</b> | the <i>driving mode</i> -specific performance by an <i>automated driving system</i> of all aspects of the <i>dynamic driving task</i> with the expectation that the <i>human driver</i> will respond appropriately to a <i>request to intervene</i>  | System  | <b>System</b>                     | Human driver                                 | Some driving modes                |
| <b>4</b>  | <b>High Automation</b>        | the <i>driving mode</i> -specific performance by an automated driving system of all aspects of the <i>dynamic driving task</i> , even if a <i>human driver</i> does not respond appropriately to a <i>request to intervene</i>   | System  | System                            | <b>System</b>                                | Some driving modes                |
| <b>5</b>  | <b>Full Automation</b>        | the full-time performance by an <i>automated driving system</i> of all aspects of the <i>dynamic driving task</i> under all roadway and environmental conditions that can be managed by a <i>human driver</i>  | System  | System                            | System                                       | <b>All driving modes</b>          |

## Level 5 Robotic Taxi

|   |                        |     |                 |                   |                      |                     |
|---|------------------------|-----|-----------------|-------------------|----------------------|---------------------|
| 5 | Full Automation        |     |                 |                   |                      | <b>Robotic Taxi</b> |
| 4 | High Automation        |     |                 |                   | Parking Garage Pilot |                     |
| 3 | Conditional Automation |     |                 | Traffic Jam Pilot |                      |                     |
| 2 | Partial Automation     |     | Parking Assist. |                   |                      |                     |
| 1 | Assisted               | ACC | LKAS            |                   |                      |                     |
| 0 | No Automation          | LDW | ESC             |                   |                      |                     |

**Eventually, but not soon!**

## Analyzing some recent company claims

**GM SuperCruise:** “General Motors...will introduce a Cadillac model in two years that **can travel on the highway without the driver holding the steering wheel or putting a foot on a pedal**”

- = SAE Level 2

**Tesla Autopilot:** “Tesla is also adding **semi-autonomous driving features**...that will allow owners to **leave some of the driving to the car's on-board computers**...These systems use sensors and cameras to help **keep the car in its lane on highways while maintaining a safe following distance**...The car will be able to **automatically change lanes...when the driver uses the turn signal**...”

- = SAE Level 2

**Mercedes-Benz Traffic Jam Assist:** “In congested traffic, a driver can **let the car steer, brake and accelerate itself**...”

- = SAE Level 2

**Google's** latest announcement: “...a dome-shaped two-seater with a **top speed of 25 mph**, is entirely computer-controlled, **lacking even a steering wheel**.”

- = SAE Level 4

## On the question of regulation

- Vehicle manufacturers and their suppliers have developed every safety innovation ever deployed on cars and trucks
  - Safety benefits quantified, benchmarking, customer acceptance... (~ a decade)
  - Regulation (*minimum* safety performance standards) always follow deployment
- Establishing minimum safety performance requirements before a technology has been deployed and proven in use is unprecedented (for good reason!)
  - High risk of stifling innovation
  - Certainty of sub-optimizing technology development
  - Cost
- Special considerations
  - Minimum safety performance requirements vs. 'do no harm'
  - Established companies vs. start-ups and small businesses
  - Federal vs. State regulatory domains

## What States Can Do NOW

Standardize Signage following National and International Standards

Maintain Highway signs  
Must be clearly visible to vehicle

Educate Law Enforcement on Automated Driving Technologies

## What States Can Do NOW!

Maintain Clear Lane Striping

Eliminate Use of Botts Dots

## CONCLUSION

- Fascination with Automated Driving Systems continues today
- Audi and VW are pioneers and leaders in Autonomous Driving Technology
- Standardized terminology matters (SAE definitions)
- Levels of driving automation matter, because they:
  - provide meaningful distinctions in functional terms
  - clarify roles (driver, driving automation system or ADS, base vehicle)
  - provide a framework for policy development
- Near term benefits largely comfort, convenience, cost; longer term benefits for safety, mobility, environment
- Premature laws and regulations threaten pace and extent of deployment if not carefully designed to minimize negative effects (restricting innovation, design sub-optimization, consumer disincentives, unnecessary cost...)

## CONCLUSION (continued)

- States can facilitate ADS deployment by:
  - Avoiding new burdens on drivers (special license and/or registration reqts)
  - Preparing legal environment for deployment
    - Exempting persons in the driver's seat of ADS-equipped vehicles (Levels 3-5) operating in automated driving mode from anti-distraction laws
    - Maintaining/improving road markings and condition
    - Updating affected personnel and processes (police, courts, driver training/testing...)
